Services Requested

- ☐ Consultation
- ☐ Stress Echocardiogram
- ☐ Cardiac CT with pre-scan consultation

- ☐ Echocardiogram
- ☐ 24hr Holter Monitor

Locations

- ☐ **Epworth Consulting Suites**

Level 6 Suite 6.4
89 Bridge Rd
Richmond VIC 3121

- ☐ **Melbourne Heart Institute**

54 Maribyrnong Rd,
Moonee Ponds VIC 3039

- ☐ **Luxe Dental Care**

Suite 3 Level 1
33 Flemington Rd
North Melbourne VIC 3051

Appointment Date: / / **Day:** **Time:**

Our Tests Are Bulk Billed.

Our tests are conducted by fully qualified health professionals with an emphasis on quality, integrity, excellence, and care.

All tests results are reported in a timely manner, and sent to your referring doctor. You will be contacted if urgent evaluation is required.

Echocardiogram

This test is an ultrasound of the heart. It obtains moving images of the heart as it beats to evaluate your heart's structure, valves, pressures, and function.

- Allow up to 1 hour for the appointment
- Wear a loose-fitting top, as this must be removed during the procedure
- No other preparation is necessary

Stress Echocardiogram

You will be exercising for a short period on a treadmill while your heart rhythm and blood pressure are monitored. Ultrasound images of the heart will be taken before and after exercise. You may be asked to stop taking beta-blockers 48 hours prior to exercise, unless otherwise directed by your referring doctor.

- Allow up to 1 hour for the appointment
- Wear comfortable loose clothing and sports shoes or flat-soled walking shoes

Holter Monitor

This is a recording device that records your heart rate and rhythm over a 24 hour period. You are encouraged to perform all your regular daily activities, as this enables us to more accurately assess you for arrhythmia, heart conduction block, heart rate control, and the adequacy of your medication.

- Allow up to 15 minutes for the appointment
- You will need to wear the device under your clothing for the entire monitoring period
- Please return the next day or as arranged for prompt reporting

Cardiac CT

CT stands for Computerised Tomography. CT scans use X-rays to take pictures from different angles around the body. A computer then produces cross-sectional sliced images of the body.

- You may be required to be injected with an intravenous iodinated radiocontrast agent, designed to provide clearer images. You may also be asked to fast for a certain period of time
